SUMMARY

- Analytical and detail-oriented developer and tester. Professional with stellar communication skills, adept at bringing all team members together to reach a common goal on time.
- Good experience with SDCL, STCL and bug life cycle.
- Conceptualizing solutions with the latest technology, design theory and creativity.

SKILLS

Programming Language: C, CSS, COBOL, JAVA(OOP), JAVA(EE) with design patterns, JavaScript, HTML, PHP, Python.

Database: SQL, Ms access, MySQL Server, pgAdmin, Oracle, PostgreSQL, MongoDB, Neo4j.

Cloud technology: AWS

Frameworks: Android, Node.js, Angular, RESTful web Service, React.js

Environment: Eclipse IDE, NetBeans IDE, Android Studio, Java, Android SDK, Android Development Tools (ADT), JSON, XML.

Software Tools: VS code, Cisco Packet Tracer, Wireshark, XAMPP, VMWare, SQL server management studio, Oracle Git version control System.

OS: Windows, Linux.

Project management : Agile methodologies

Network Technologies and Protocols: LAN/WAN, TCP/IP, UDP

EDUCATION

Computer Programming Diploma
Algonquin College, Ottawa, ON.

May-2023

WORK EXPERIENCE

Software developer - Intern

Jan-22 - Present

Anemoia Studio, San Diego, USA.

- Respond to client needs for applications with an eye to the most feasible and effective solutions.
- Optimize the interfacing of the apps with a variety of systems to ensure flexible and agile use.
- Utilized advanced functions of the Java software development kit (SDK) in order to optimize the flexibility of apps for different mobile devices.
- Implemented Google firebase services to work with back-end services
- Developed new features for proprietary Android applications used on phones and tablets.
- Managed tasks within Agile framework, cleared Sprinted tasks, and controlled JIRA workflows.
- Documented the requirements and Agile user stories with technical writing skills

PROJECTS

Food Ordering website

- **Technology used:** HTML5,CSS3,MySQL,PHP,JSON,JavaScript.
- A responsive and dynamic website made with the HTML5 and CSS3 for front-end. After fetching a data website can store the data in database Using MySQL. And process the data accordingly using PHP.
- Built responsive, accessible and dynamic web pages to enable users to easily navigate site.
- User can manage the cart items from JSON elements and website calculate the total cost of the food.
- using Google Analytics to track website traffic, user behavior, and conversion rates. Developed custom dashboards and reports to monitor website performance and optimize user engagement.

Furniture store website

- **Technology Used:** Node.js,React,Postman API,MongoDB
- Designed and developed the website's front-end using React.js to create an interactive user interface.
- Implemented the website's back-end using Node.js, Express.js, and MongoDB to create a database for storing users' data and products.
- Integrated Postman API to ensure secure payment transactions by the website's users.
- Optimized the website's speed and performance by implementing the best web development practices.
- Worked closely with the project team to ensure the timely delivery of the project and addressed any issues that arose.

Android Application

Event Tracker App:

- **Technology Used :** Android Studio, JAVA, XML, SQLite Database, REST API.
- Designed and Developed an application for mobile that can keep the track of Events that to be held in City and user can save and register events.
- Worked with the API to Connect to Event manager server to get the data from JSON.
- Added feature to save the event that store in the database and retrieve them when user revoke the list.

Automatic computer configuring script (Python / Bat File)

- Installing and configuring new laptop are a tedious task all the time so to overcome this issue I helped create a bat file to the professor so that students can directly run the bat file and all the necessary software will be installed and configurations will be made.
- The file installed several programs like C++, Java, python, system variables etc. With this I also added an option where you can choose email or whatsapp to get notifications about the status of the installations and logs in case of a failure. This was done using python libraries such as sys, pywhatkit, math, random, OS, subprocesses which helped and will help professors and students to come on the same level of PC configuration.

Employee PayRoll System(Enterprise application)

- **Technology used:**JAVA(OOP)
- By conducting research for Object Oriented Programming Made the Employee payroll system can count the salary for different types of employee's salary such as Full-time, Part-time, Commission based employee and calculate the total salary including the bonus.
- Implemented the concepts such as Abstraction, Inheritance and Polymorphism from OOPs.
- Implemented Design pattern like MVC and MVP to accelerate the development process.
- Implemented JDBC,JSF,JPA and Hibernates to work with backend capabilities.
- Used JavaFX as GUI library to deliver desktop Application
- Developed unit test cases and mock testing using JUnits.
